

BUZZER

WALKIE TALKIE

project type:	Digital representation exercise
end date:	jan 2022
duration:	1 months

The Buzzer was made as a **creativity** and **modeling** exercise within a course of digital representation: the product aimed at showing the personal skills in a unique and flamboyant way. The program used for the modeling was **Autodesk Alias**, while **Luxion Keyshot** was used for displaying the final results as renderings. The project is a tribute to Pixar's Toy Story (1995), the first animated film made entirely in CGI.

TO INFINITY AND BEYOND: A WALKIE TALKIE FOR NOSTALGIC KIDS AND PLAYFUL GROWNUPS

The Buzzer is a futuristic piece of hardware that only the most expert **space rangers** may utilize: it allows you to **communicate** in a trendy new way with all your friends - as long as they are in a mile and a half radius and as long as you speak one at the time. And if you don't have any friends, don't worry! **Lieutenant Buzz Lightyear** will keep you company with his big bad face: as he always used to say, **you've got a friend in me.**
