

MAIALINO

SUIFORME COFFEE TABLE

project type: Wood design prototyping

producer: partnership with Artwood Academy (Camnago MB)

end date: dec 2023

duration: 2 months

teammates: S. Ciccia | F. Busani | M. Foieni

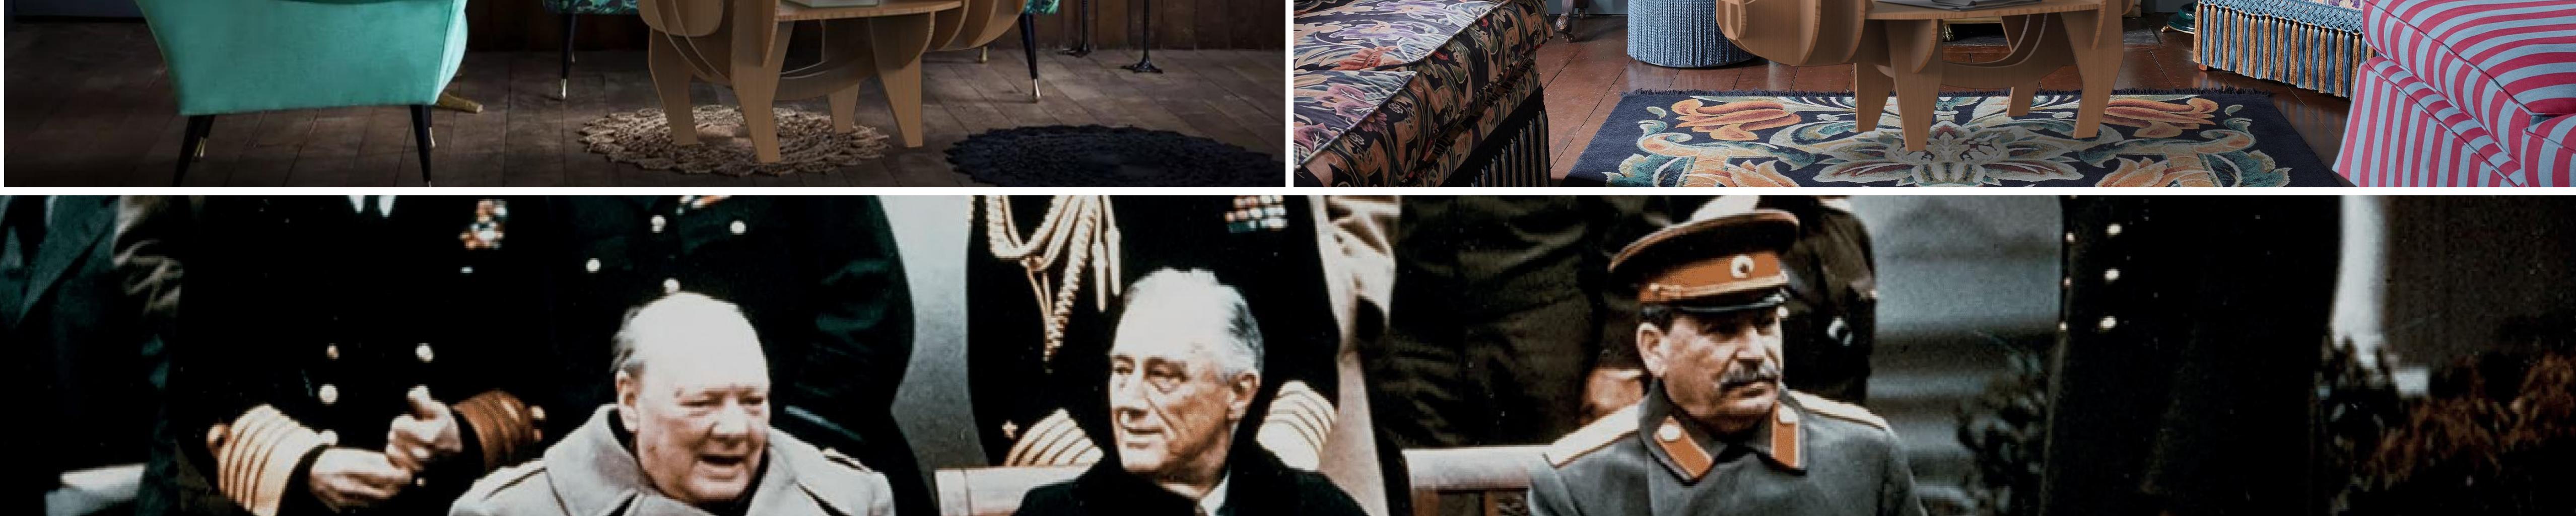

Maialino is an exuberant and **histrionic** piece of furniture, meant for the lounges of those who know how to not take themselves too seriously. It's a **provocative statement** piece made entirely of **dry-assembled CNC-cut wood panels**. Despite its rural appearance and the obvious satire behind it, it's still a completely functional coffee table.

PRODUCTION

Maialino is assembled by its users from a total of 19 CNC-cut pieces, without the need of any nail, screw or glue. The project focused on the feasibility of the product with a practical approach; Designers and technicians worked **side by side** through multiple attempts trying to maximize efficiency. CNC techniques were studied and applied directly by our team, thanks to our hosting partner.

PROTOTYPATION AND SALONE EXPOSITION

Maialino was produced in a small batch and exhibited by Artwood Academy, our partner, at the Salone Satellite during the **2023 Salone del Mobile**.
